Design Tools for Evidence-Based Healthcare Design Michael Phiri,2014-12-05 The growing movement towards evidence based healthcare design has largely emphasised a change of culture and attitudes It has advocated for new ways of working but until now it has not focused on equipping healthcare clients and their designers with the practical means to exploit the potential benefits from evidence based architectural design Development of indicators and

tools that aid designers and users of the built environments in thinking about quality enhances the design process to achieve better outcomes. Importantly, design tools can support managers and designers through end user involvement and an increased understanding of what patients and staff expect from their healthcare facilities. They can facilitate the creation of patient centred environments which improve user satisfaction.

Design Tools for Evidence Based Healthcare Design Discusses the tools that are being used to achieve design quality and excellence within the context of NHS procurement systems such as PFI Procure21 and others. Collates information that increases our understanding of these tools in order to be able to make the best use of them. Clarifies where during the various stages of a building's life from inception, design, construction, occupation and re-use these tools should be used in order to derive the benefits possible from evidence based design. Provides in one place an authoritative reference publication that will act as a memory, a user guide and manual for these design tools. Illustrated with case studies from throughout the UK and written by a well known expert in the field, this book will provide essential reading for anyone involved in healthcare design.

Delivering Value with BIM Adriana Sanchez, Keith Hampson, Simon Vaux, 2016-03-31. Building Information Modelling (BIM) is a global phenomenon which is gaining significant momentum across the world. Currently there is little information on how to realise and monitor benefits from implementing BIM across the life cycle of a built environment asset. This book provides a practical and strategic framework to realise value from implementing BIM by adapting Benefit Realisation Management theory. It presents an approach for practitioners aiming to implement BIM across the life cycle of built environment assets including both buildings and infrastructure. Additionally, the book features wide ranging information about BIM, the challenges of monitoring progress towards benefit goals and the greater context of implementation, a set of dictionaries that illustrate how benefits can be achieved, what the benefit flows are and the enabling tools and processes that contribute to achieving and maximising them, a suite of measures that can serve to monitor progress with examples of how they have been used to measure benefits from BIM, real world examples from across the world and life cycle phases that show how these benefits can be achieved and information on international maturity and competency measures to complement the value realisation framework. Including a blend of academic and industry input, this book has been developed in close collaborative consultation with industry, government and international research organisations and could be used for industry courses on BIM benefits and implementation for asset management or by universities that teach BIM related courses.
