

FOSS Science Water Planet Study Guide

Investigation 1:

What is the Sun? The Sun is an average star, composed mostly of hydrogen (72) and helium (26%), around which the other solar system bodies revolve. It is the star closest to the Earth.

What is the solar system? The solar system is the Sun and all the bodies that orbit it, including planets and their moons, asteroids, and comets.

What is gravity? Gravity is the force of attraction between two objects; larger bodies, like the Sun, have a greater force of gravity.

Why do planets travel around the Sun in circular paths? Gravity pulls on planets with a force that changes their direction of travel from a straight line into a circle.

Compare and contrast asteroids and comets. Both orbit the sun and are smaller than planets. Comets are rock mixed with ice while asteroids are just rock. Comets are farther from the Sun.

Investigation 2:

What is a variable? A variable is anything that you can change in an experiment that might affect the outcome.

What variable might affect the number of cycles the pendulum makes in 15 seconds? Mass, length, and starting position

Where have you seen a pendulum? In an old clock, at a museum, as a playground swing, in a metronome

What variables made no difference in the number of swings? Mass and release position

Which variable did make a difference in the number of swings? Length

What is the relationship between the length of the pendulum and the number of swings it makes in a unit of time? As the length of the pendulum increases, the number of swings decreases

What is a two-coordinate graph? A display of experimental data that shows a relationship between an independent variable and a dependent variable

What is a prediction? A reasoned estimation of a future event based on context, data, or experience
