- **Orientation:** The phase during which the patient, nurse and family work together to recognize, clarify and define existing problems.
- **Identification:** the phase after which the patient's initial impression has been clarified and when he or she begins to respond selectively to those who seem to offer the help that is needed; patients may respond in one of three ways. (1) on the basis of participation or interdependent relations with the nurse, (2) on the basis of independence or isolation from the nurse, (3) on the basis of helplessness or dependence on the nurse.
- **Exploitation:** the phase during which the patient proceeds to take full advantage of the services offered to him or her; knowing which services are available, feeling comfortable within the setting & serving as an active participant in his or own health care. the patient exploits the services available & explores all possibilities of changing the situation.
