Linear Algebraic Groups T.A. Springer, 2010-10-12 The first edition of this book presented the theory of linear algebraic groups over an algebraically closed field The second edition thoroughly revised and expanded extends the theory over arbitrary fields which

are not necessarily algebraically closed It thus represents a higher aim As in the first edition the book includes a self contained treatment of the prerequisites from algebraic geometry and commutative algebra as well as basic results on reductive groups As a result the first part of the book can well serve as a text for an introductory graduate course on linear algebraic groups

Jacobson,2013-06-29 This collection contains all my published papers both research and expository that were published from 1934 to 1988 The research papers arranged in chronological order appear in Volume I and II and in the first part of Volume III The expository papers which are mainly reports presented at conferences appear in chronological order in the last part of Volume III Volume I covers the period 1910 to 1947 the year I moved to Yale Volume II covers the period 1947 to 1965 when I became Chairman of the Department at Yale and Volume III covers the period from 1965 to 1989 which goes beyond my assumption of an emeritus status in 1981 I have divided the time interval covered in each volume into subintervals preceded by an account of my personal history during this period and a commentary on the research papers published in the period I have omitted commentaries on the expository papers and have sorted out the commentaries on the research papers according to the principal fields of my research The personal history has been based on my recollections checked against written documentation in my file of letters as well as diaries One of these was a diary I kept of my trip to the USSR in 1961 the others were diaries Florie Florence kept during other major visits abroad I have also consulted Professor A W Tucker on historical details on Princeton during the 1930 s

Basic Algebra

Nathan Jacobson,1971 **Lectures in Abstract Algebra** N. Jacobson,2012-12-06 The present volume completes the series of texts on algebra which the author began more than ten years ago The account of field theory and Galois theory which we give here is based on the notions and results of general algebra which appear in our first volume and on the more elementary parts of the second volume dealing with linear algebra The level of the present work is roughly the same as that of Volume II In preparing this book we have had a number of objectives in mind First and foremost has been that of presenting the basic field theory which is essential for an understanding of modern algebraic number theory ring theory and algebraic geometry The parts of the book concerned with this aspect of the subject are Chapters I IV and V dealing respectively with finite dimensional field extensions and Galois theory general structure theory of fields and valuation theory Also the results of Chapter III on abelian extensions although of a somewhat specialized nature are of interest in number theory A second objective of our account has been to indicate the links between the present theory of fields and the classical problems which led to its development

An Introduction to Noncommutative Noetherian Rings K. R. Goodearl,Robert B. Warfield,1989

Introduces and applies the standard techniques in the area ring of fractions bimodules Krull dimension linked prime ideals

Encyclopaedia of Mathematics Michiel Hazewinkel,2013-12-20 **Octonions, Jordan Algebras, and Exceptional**

Groups Tonny A. Springer,Ferdinand D. Veldkamp,2000-05-16 The 1963 G ttingen notes of T A Springer are well known in

the field but have been unavailable for some time This book is a translation of those notes completely updated and revised The part of the book dealing with the algebraic structures is on a fairly elementary level presupposing basic results from algebra In the group theoretical part use is made of some results from the theory of linear algebraic groups The book will be useful to mathematicians interested in octonion algebras and Albert algebras or in exceptional groups It is suitable for use in a graduate course in algebra
