Process Based Unification for Multi-model Software Process Improvement Z.D. Kelemen, 2013-01-30 Many different quality approaches are available in the software industry Some of the approaches such as ISO 9001 are not software specific i.e. they define general requirements for an organization and they can be used at any company Others such as Automotive SPICE have been derived from a software specific approach and can be used for improving specific in this case automotive processes Some are created to improve development processes e.g. CMMI for Development others focus on services e.g. CMMI for Services and again others are related to particular processes such as software testing e.g. TMMi or resource management e.g. People CMM A number of differences among quality approaches exist and there can be various situations in which the usage of multiple approaches is required e.g. to strengthen a particular process with multiple quality approaches or to reach certification of the compliance to a number of standards First of all it has to be decided which approaches have potential for the organization In many cases one approach does not contain enough information for process implementation Consequently the organization may need to use several approaches and the decision has to be made how the chosen approaches can be used simultaneously This area is called Multi model Software Process Improvement MSPI The simultaneous usage of multiple quality approaches is called the multi model problem In this dissertation we propose a solution for the multi model problem which we call the Process Based Unification PBU framework The PBU framework consists of the PBU concept a PBU process and the PBU result We call PBU concept the mapping of quality approaches to a unified process The PBU concept is operationalized by a PBU process The PBU result includes the resulting unified process and the mapping of quality approaches to the unified process Accordingly we addressed the

following research question Does the PBU framework provide a solution

Water and Wastewater Pipeline Assessment Technologies Justin Starr,2021-05-31 Water and wastewater infrastructure are a somewhat invisible yet critical part of modern life Incredibly many buried assets have been in service for 50 100 years and are still in good condition Conversely other systems fail well before their predicted design lives causing property damage injury and even loss of life In many cases early detection could have prevented catastrophic failure and understanding the state of underground infrastructure has become a key priority for many municipalities Industry has responded with a number of new and innovative technologies for condition assessment however understanding these tools can be difficult as many vendors treat their proprietary systems as trade secrets

Water and Wastewater Pipeline Assessment Technologies Classification Systems Sensors and Results Interpretation provides a thorough guide to the technical workings of some of the most popular water and wastewater assessment technologies available including CCTV crawlers acoustic listening devices laser sensors 360 video cameras pipe penetrating radar and more

Features Presents an overview of current technologies in CCTV inspection including next generation video formats high definition resolution and fisheye sidescan technology Provides helpful tips and tricks to cut through technical jargon and identify the technological specifications to compare between multiple vendors Examines the pros and cons of competing technologies including laser and lidar and provides an overview of unique approaches such as Pipe Penetrating Radar Focused Electrode Leak Location and more Highlights the importance of coding standards data management and software tools that can be leveraged to create a successful asset management program

Water and Wastewater Pipeline Assessment Technologies Classification Systems Sensors and Results Interpretation provides a mixture of theory and real world practical considerations ranging from deployment tips and data exchange formats to the technical limitations of different technologies The book is a valuable resource for municipal employees project engineers and others involved in designing and implementing major inspection programs
