

Ray Tracing (Lenses)

Answer Key

Reading: [Introduction to ray optics](#), [Real and virtual images](#), [Magnification](#), [Ray diagrams](#), [Ray-tracing for lens images](#)

Prior Knowledge Questions: (Structure the PQA's using the items in [Table 1](#). The answers to these questions are not written into your notebook and are **not** included in the answer key. An answer key to these questions is available [here](#).)

Table 1 depicts an optical setup with nothing but a magnifying glass. The object and the glass surface are highlighted with blue. How does the glass surface modify the rays of incident light?

1. Convex spherical refractive glass surfaces have a primary characteristic (the magnifying glass in this case):

2. A magnifying glass is an example of a **convex lens**—a refractive surface curved on both sides.

What is a convex lens useful for creating here?

Answer: virtual (a virtual image) by forming the image of the object on the same side.

Visual Question

How Ray Tracing of parallel rays shows image formation through a lens. The light rays are parallel **parallel** to the axis, pass through the two principal foci, and **parallel** to the axis of the lens.

The rays are either perpendicular to the axis. Light **parallel** to the optical axis and the lens through **parallel** on the left side; the **parallel** is shown.

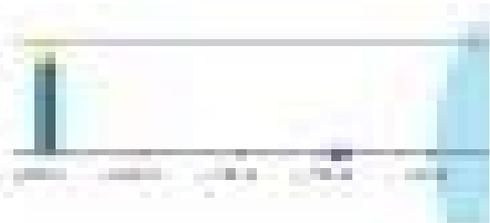

1. The rays are either perpendicular to the axis, and the **parallel** of the lens. Show the rays on the left side, and by it, a single vertical.

What is shown here about the lens? (The answer is not through the lens.)

Answer: The lens is a convex lens that is parallel to the axis and passes through the principal foci.

2. Turn off the **parallel** and turn on the lens through **parallel**. Show the rays.

What is presented about the lens? (The answer is not through the lens.)

Nature-Inspired Approaches to Engineering and Healthcare Solutions Nilanjan Dey, 2026-01-01 This book examines the ways in which biological ideas like evolution and swarm behavior can be applied to tackle challenging issues in a variety of fields A variety of cutting edge methods such as ant colony optimization and genetic algorithms will be introduced to readers along with their useful applications in disciplines like environmental science and engineering Through the integration of nature and technology this book illustrates how biomimicry might improve problem solving techniques Scientists professionals and anyone interested in the connection between environment and AI in computers will find it to be a useful resource *Five Design-Sheets: Creative Design and Sketching for Computing and Visualisation* Jonathan C.

Roberts, Christopher J. Headleand, Panagiotis D. Ritsos, 2017-05-28 This book describes a structured sketching methodology

to help you create alternative design ideas and sketch them on paper The Five Design Sheet method acts as a check list of tasks to help you think through the problem create new ideas and to reflect upon the suitability of each idea To complement the FdS method we present practical sketching techniques discuss problem solving consider professional and ethical issues of designing interfaces and work through many examples Five Design Sheets Creative Design and Sketching for Computing and Visualization is useful for designers of computer interfaces or researchers needing to explore alternative solutions in any field It is written for anyone who is studying on a computing course and needs to design a computing interface or create a well structured design chapter for their dissertation for example We do acknowledge that throughout this book we focus on the creation of interactive software tools and use the case study of building data visualization tools We have however tried to keep the techniques general enough such that it is beneficial for a wide range of people with different challenges and different situations and for different applications

Computer - Human Interaction in Symbolic Computation Norbert Kajler,2012-12-06 The well attended March 1994 HIse workshop in Amsterdam was a very lively conference which stimulated much discussion and human human interaction As the editor of this volume points out the Amsterdam meeting was just part of a year long project that brought many people together from many parts of the world The value of the effort was not only in generating new ideas but in making people aware of work that has gone on on many fronts in using computers to make mathematics more understandable The author was very glad he attended the workshop In thinking back over the conference and in reading the papers in this collection the author feels there are perhaps four major conclusions to be drawn from the current state of work 1 graphics is very important but such features should be made as easy to use as possible 2 symbolic mathematical computation is very powerful but the user must be able to see intermediate steps 3 system design has made much progress but for semester long coursework and book length productions we need more tools to help composition and navigation 4 monolithic systems are perhaps not the best direction for the future as different users have different needs and may have to link together many kinds of tools The editor of this volume and the authors of the papers presented here have also reached and documented similar conclusions
