The image displays three overlapping worksheets for a reading comprehension activity. The central worksheet is titled "Force and Acceleration" and includes the following sections:

- Reading Passage:** A text explaining force and acceleration, starting with "Force and acceleration are fundamental concepts in classical mechanics. According to Newton's second law, which states that the net force acting on an object is equal to the mass of the object multiplied by its acceleration ($F = ma$), the relationship between force and acceleration is directly proportional. In other words, if the net force acting on an object is doubled, its acceleration will also double, provided the mass remains constant. Similarly, if the mass of an object is doubled while the net force remains constant, its acceleration will be halved." It also discusses Newton's first law and the concept of net force.
- Comprehension Questions:** A list of 15 questions, including:
