web when you solve a quadratic using the quadratic formula you do a lot of simplification including simplifying the square root if the square root goes away because it contained a perfect square then your answers will be rational numbers

web the solution s to a quadratic equation can be calculated using the quadratic formula the means we need to do a plus and a minus so there are normally two solutions the blue part  $b^2 - 4ac$  is called the discriminant because it can discriminate

between the possible types of answer when it is positive we get two real solutions

web good question the answer to a problem like this is usually written as the square root of the number for example if we had an equation like  $x^2 = 57$  where the square root of 57 would be the value for x then it is normally written  $\sqrt{57}$  use the quadratic formula to solve the equation  $0 = -7q^2 + 2q + 9$  now
