Wolf,Rand Corporation,1978 This report discusses Army land vehicle maintenance data and data collection efforts and describes the development of a general method for evaluating diagnostic aid systems Differences among data sources are illustrated by a comparison of maintenance data for the 1 4 ton truck The evaluation method is based on two assumptions first that current vehicle operating and maintenance practices embody a number of problems that cause

maintenance costs to be higher than necessary and second that diagnostic aid systems perform functions that can reduce or eliminate these problems Two models were designed to implement this methodology One employs a cost factor approach while the other uses a reliability maintainability approach Several analyses illustrate the abilities of both models to identify the most important maintenance problems examine the effects of changes in problem magnitudes or diagnostic effects and estimate the potential savings resulting from the use of a particular diagnostic aid system Author **Government Reports Announcements** ,1974 *Government Reports Announcements & Index* ,1996-06 **Technical Abstract Bulletin** ,1979 *Operator's Manual for 2-1* United States.
