The Highway Capacity Manual: A Conceptual and Research History Roger . P Roess,Elena . S Prassas,2014-04-03 Since 1950 the Highway Capacity Manual has been a standard used in the planning design analysis and operation of virtually any highway traffic facility in the United States It has also been widely used abroad and has spurred the development of similar manuals in other countries The twin concepts of capacity and level of service have been developed in the manual and methodologies have been presented that allow highway traffic facilities to be designed on a common basis and allow for the analysis of operational quality under various traffic demand scenarios The manual also addresses related pedestrian bicycle and transit issues This book details the fundamental development of the concepts of capacity and level of service and of the specific methodologies developed to describe them over a wide range of facility types The book is comprised of two volumes Volume 1 this book focuses on the development of basic principles and their application to uninterrupted flow facilities freeways multilane highways and two lane highways Weaving merging and diverging segments on freeways and multilane highways are also discussed in detail Volume 2 focuses on interrupted flow facilities signalized and unsignalized intersections urban streets and arterials It is intended to help users of the manual understand how concepts approaches and specific methodologies were developed and to understand the underlying principles that each embodies It is also intended to act as a basic reference for current and future researchers who will continue to develop new and improved capacity analysis methodologies for many years to come

Historic Trends and Future Consequences of Projected Traffic Along Rural Interstate 35 ,1996 Vehicular traffic moving through rural sections of Interstate 35 in Texas is growing at a dramatic rate The primary objective of this report is to demonstrate the future loss of personal mobility by the highway user on rural sections of the Interstate A second primary objective is to lay the groundwork for a comprehensive economic analysis of the problems associated with large traffic flows by using rural IH 35 as an example of a high traffic corridor Additionally this report will provide a foundation for suggesting alternative solutions to the problem of traffic congestion on high traffic corridors By demonstrating the problems of growing traffic demand on rural high traffic corridors in Texas and by building on the findings of an earlier study we suggest that a supercorridor also known as a managed transportation system MTS continues to be a feasible option for mitigating the growing traffic congestion problems on rural corridors
