

UNIT 2- REASONING IN GEOMETRY

GQ- What has logic done to improve society? How will the use of logic improve my success as a student? In what context(s) is proof necessary?

2.1 An Introduction to Proof

What is a Proof?

A proof is convincing argument that something is true. In mathematics, a proof starts with things that are agreed on (called postulates or axioms). Formal proofs follow a prescribed form. For Example:

$$5x + 4 = 24$$

$$5x = 20$$

$$x = 4$$

Given

Subtraction Property of Equality

Division Property of Equality

Your Try! In your own words, describe what a proof is.

Example 1: Give Proof of a Conjecture

The following table shows the number of points and the corresponding number of segments:

Points	2	3	4	5
Segments	1	3	6	10

Conjecture: For n points on a circle, the number of segments needed to connect all points is $\frac{n(n-1)}{2}$.

Proof: For each point, a segment connects it to every other point, giving $n - 1$ segments. Therefore, the total number of segments should be $n(n - 1)$. However, \overline{AB} is the same as \overline{BA} , so each segment is counted twice. Thus the total must be divided by 2, giving $\frac{n(n-1)}{2}$.
