**Heterogeneity in Statistical Genetics** Derek Gordon, Stephen J. Finch, Wonkuk Kim, 2020-12-16 Heterogeneity or mixtures are ubiquitous in genetics Even for data as simple as mono genic diseases populations are a mixture of affected and unaffected individuals Still most statistical genetic association analyses designed to map genes for diseases and other genetic traits ignore this phenomenon In this book we document methods that incorporate heterogeneity into the design and analysis of genetic and genomic association data Among the key qualities of our developed statistics is that they include mixture parameters as part of the statistic a unique component for tests of association A critical feature of this work is the inclusion of at least one heterogeneity parameter when performing statistical power and sample size calculations for tests of genetic association We anticipate that this book will be useful to researchers who want to estimate heterogeneity in their data develop or apply genetic association statistics where heterogeneity exists and accurately evaluate statistical power and sample size for genetic association through the application of robust experimental design

Genomic Selection in Plants Ani A. Elias, Shailendra Goel, 2022-08-18 Genomic selection GS is a promising tool in the field of breeding especially in the era where genomic data is becoming cheaper The potential of this tool has not been realized due to its limited adaptation in various crops Marker Assisted Selection MAS has been the method of choice for plant breeders while using the genomic information in the breeding pipeline MAS however fails to capture vital minor gene effects while focusing only on the major genes which is not ideal for breeding advancement especially for quantitative traits such as yield The main aim of statistical methodologies coming under the umbrella of GS on using the whole genome information is to predict potential candidates for breeding advancement while optimizing the use of resources such as land manpower and most importantly time Lack of proper understanding of the methods and their applications is one of the reasons why breeders shy

away from this tool The book is meant for biologists especially breeders and provides a comprehensive idea of the statistical methodologies used in GS guidance on the choice of models and design of datasets The book also encourages the readers to adopt GS by demonstrating the current scenarios of these models in some of the important crops among oilseeds vegetables legumes tuber crops and cereals For ease of implementation of GS the book also provides hands on scripts on GS data design and modeling in a popular open source statistical program Additionally prospective in GS model development and thereby enhancement in crop improvement programs is discussed
