vulnerabilities ranging from MySpace's Samy worm to MacWorld's conference code validator. Even more important, it delivers specific up-to-the-minute recommendations for securing Ajax applications in each major Web programming language and environment including NET, Java, PHP, and even Ruby on Rails. You'll learn how to mitigate unique risks associated with Ajax, including overly granular Web services, application control flow tampering, and manipulation of program logic. Write new Ajax code more safely and identify and fix flaws in existing code. Prevent emerging Ajax-specific attacks including JavaScript hijacking and persistent storage theft. Avoid attacks based on XSS and SQL Injection, including a dangerous SQL Injection variant that can extract an entire backend database with just two requests. Leverage security built into Ajax frameworks like Prototype, Dojo, and ASP.NET AJAX Extensions, and recognize what you still must implement on your own. Create more secure mashup applications. Ajax Security will be an indispensable resource for developers coding or maintaining Ajax applications, architects and development managers planning or designing new Ajax software, and all software security professionals from QA specialists to penetration testers.
