Information technology a framework for assessing and improving enterprise architecture management. ,2003

An enterprise architecture EA provides a clear and comprehensive picture of the structure of an entity whether an organization or a functional or mission area It is an essential tool for effectively and efficiently engineering business processes and for implementing and evolving supporting systems The concept of an architecture to describe an enterprise

first emerged in the mid 1980s and over the years various frameworks² for defining the content of EAs have been published. Our work in the early 1990s identified architectures as a critical success factor allowing organizations to effectively apply information technology IT to meet mission goals. Since then we have worked with the Congress, the Office of Management and Budget (OMB) and the federal Chief Information Officers (CIO) Council to recognize the importance of architectures and assist agencies in developing, maintaining and using them. In our reviews of agency IT management practices and major systems modernization programs we continue to identify the lack of an architecture as a major management weakness and we have made numerous recommendations addressing this important area.
