Making it tangible. Learning outcomes in science education Sascha Bernholt, Knut Neumann, Peter Nentwig, 2012 One of the central features in current educational reforms is a focus on learning outcomes Many countries have established or revised standards to describe what teachers are supposed to teach and students are expected to learn More recently the emphasis has shifted to considerations of how standards can be operationalized in order to make the outcomes of educational efforts more tangible This book is the result of a symposium held in Kiel that was arranged by two science education groups one at the IPN Leibniz Institute for Science and Mathematics Education at the University of Kiel in Germany and the other at the University of York UK The seminar brought together renowned experts from 12 countries with different notions of the nature and quality of learning outcomes The aim was to clarify central conceptions and approaches for a better understanding among the international science education community The book is divided into five parts In Part A the organizers set the scene describing the rationale for arranging the symposium Part B provides a broad overview about different approaches challenges and pitfalls on the road to the clarification of meaningful and fruitful learning outcomes The set of papers in Part C provides deep insights into different although comparable approaches which aim to frame to assess and to promote learning and learning outcomes in science education Smaller projects are presented as well as broad coordinated national programs The papers in Part D outline the individual historical development from different national perspectives reflecting the deficits and problems that led to current reforms Finally a summary of the organizers analyses the

conclusions from different vantage points

Teaching Science Tony Liversidge, Matt Cochrane, Bernard Kerfoot, Judith Thomas, 2009-06-30 Reflective practice is at the heart of effective teaching and this book helps you develop into a reflective teacher of Science Everything you need is here guidance on developing your analysis and self evaluation skills the knowledge of what you are trying to achieve and why and examples of how experienced teachers deliver successful lessons It includes advice about obtaining your first teaching post and about continuing professional development The book shows you how to plan creative lessons how to make good use of resources and how to assess pupils progress effectively Each chapter contains points for reflection which encourage you to break off from your reading and think about the challenging questions that you face as a new teacher The book comes with access to a companion website www.sagepub.co.uk/secondary where you will find Videos of real lessons so you can see the skills discussed in the text in action Links to a range of sites that provide useful additional support Extra planning and resource materials If you are training to teach science this book will help you to improve your classroom performance by providing you with practical advice but also by helping you to think in depth about the key issues It also supplements guidance on undertaking a research project with examples of the research evidence that is needed in academic work at Masters level essential for anyone undertaking an M level PGCE
