

Required Tools for Movement Installation and Adjustment

Small Hand Saw (Firm)

Tap Measure

Wrench/Hex Key (Metric) Head Screwdriver

Movement/Chime Mounting

When you are ready to mount the movement, take a moment to tighten all of the nuts that secure the four movement mounting brackets to each corner on the front surface of the movement.

The 81000A movement will need to be attached to a piece of wood commonly called a dist board. Generally the dist board will span the inside length and width of the case, and have a thickness of 1/2" (maximum 5/16"). The dist board will require a cut-out (two cuts for the center shaft and one cut on each outer part), as well as a slot to accommodate the distance level (see Illustration 2). You will find a single sheet instruction (10000) enclosed with your movement. This sheet will have recommended inside-slot size dimensions as well as a dimensional diagram for the center shaft and key-wind drive hole.

The dist. or wood base, should mount to the front surface of the dist board. Once the dist has been mounted, slide the chime level extension over the distance level of the movement. Do not tighten the screw at this time. Next, you may secure the movement to the backside of the dist board (inside the case) with the 8 mounting screws included. When mounting the movement, use the dist color guides (provided with the movement) to ensure that the center shaft and key-wind drive align with the corresponding holes in the dist. Also, make certain the distance level extension is inserted through the distance slot of the dist. Please note that the movement mounting top nut can be rotated as needed by simply loosening the nut on the front plate of the movement. Once the movement has been secured, you may tighten the screw on the distance level extension.

When mounting the chime rail assembly, you will want to make certain that the harmonics are positioned so that they will strike the chime rails about 1" from the cooling holes where the chime rail are secured (see Illustration 3). You may mount the chime rails directly to the inside bottom plate. However, you can also use a mounting block if you should require less gap between the harmonics heads and rail. Generally a 1/16" gap is a recommended starting point for harmonized gap (see Illustration 4 - letter C). Further adjustments to improve sound quality will be made to each harmonic in a later step.

Winding Hands, Synchronizing Time and Chimes

Simply using a moment to wind all three key-wind rotors. Your movement features an automatic stop mechanism when winding, so each rotor cannot be over-wound. Generally the right key-wind (at the rear of the movement) is the last place to begin winding. This wind the main melody chime going, and tends to be the center of the three to wind. Wind each key-wind until the automatic mechanism is engaged.

Temporarily place the minute hand over the source portion of the hand shaft (where it points to a real position of the time). Move the distance level (located on the left as you face the front of the movement - see Illustration 2) up to the "chime" position.

Carefully rotate the hand clockwise until you hear a "click" sound. **Warning:** If the movement should chime, allow the movement to completely chime (including the first chime) before rotating the hand once more. Continue to rotate the minute hand up to 1 full rotation (winding) at every 15 minute interval to allow the movement to correct and
