

Frog Dissection: Internal Anatomy view all

Dissection Instructions

1. Place the frog in the dissecting pan ventral side up.
2. Use scissors to lift the abdominal muscles away from the body cavity.
Cut along the midline of the body to the forelimbs.
3. Make transverse (horizontal) cuts near the arms and legs.
4. Lift the flaps of the body wall and pin back.
If your specimen is a female, the body may be filled with eggs. You may need to remove these eggs to view the organs.

Locate each of the organs below. Check the box to indicate that you found the organ.

1. **Fat Bodies** – Spaghetti-shaped structures that have a bright yellow-orange color; these fat bodies may need to be removed to see the other structures. Usually they are located just on the inside of the abdominal wall.
2. **Pertoneum** – A spider-web like membrane that covers many of the organs, most easily seen covering the heart.
3. **Liver** – The largest structure of the body cavity. This brown colored organ is composed of three lobes. The **right lobe**, the **left anterior lobe**, and the **left posterior lobe**. The liver secretes a digestive juice called bile which is needed for the digestion of fats.
4. **Heart** – at the top of the liver, the heart is a triangular structure. The **left and right atrium** can be found at the top of the heart. A single **ventricle** located at the bottom of the heart. The large vessel extending out from the heart is the **aortic arteriole**.
5. **Lungs** – Locate the two spongy lungs by looking behind the heart and liver.
6. **Gallbladder** – Lift the lobes of the liver, there will be a small green sac under the liver. This is the gallbladder, which stores bile. (think it kind of looks like a tongue!)
7. **Stomach** – Curving from underneath the liver is the stomach. The stomach is the first major site of chemical digestion. Frogs swallow their food whole. Follow the stomach to where it turns into the small intestine. The **pyloric sphincter valve** regulates the exit of digested food from the stomach to the small intestine.
8. **Pancreas** – This structure is located on the inner curve of the stomach. It is a gland that often falls apart during the preserving process so it may not be visible on your frog. It secretes insulin and other hormones.
9. **Small Intestine** – The stomach leads to the small intestine. The first straight portion of the small intestine is called the **duodenum**, the curved portion is the **ileum**. The ileum is held together by a membrane called the **mesentery**. Note the blood vessels running through the mesentery, they will carry absorbed nutrients away from the intestine. Absorption of digested nutrients occurs in the small intestine.
