## Description

The HART (Highway Addressable Remote Transducer) Communicator is a hand-held interface to HART compatible field instruments, such as the DVC5000 Series digital valve controllers and the Type DT4000 digital transducer. The HART Communicator uses the Bell 202 frequency shift keying (FSK) technique. This technique superimposes high-frequency digital communication signals on the standard 4 to 20 mA current loop. Because the net energy added to the loop is zero, communication does not disturb the 4 to 20 mA signal.

## Specifications

Specifications for the HART Communicator can be found in the *Product Manual for The HART Communicator*. Please refer to that manual for information regarding specifications.

## The Model 275 HART Communicator

This section discusses the display, keypad, and menu structure for the HART Communicator, shown in figure 2. For information on connecting the HART communicator to the instrument, see the section Connecting the HART Communicator to a FIELDVUE Instrument in this manual. For more information on the HART Communicator, such as specifications and servicing, see the *Product Manual for the HART Communicator*.
