

LIZARD EVOLUTION VIRTUAL LAB

Directions: Begin in the Introduction Tab. Read the Introduction and watch the Welcome to the Lizard Evolution Lab. Answer the following questions as you finish each module of the virtual lab.

Click on Module 1: Ecomorphs and follow the directions as you work through the information.

1. At the beginning of the virtual lab, you were asked to sort eight lizards into categories. What criteria did you initially use to make your groups? Did you revise your criteria later? Why?

I based my criteria off of the legs. I chose the size of the legs because I think that each of the different anoles had evolved based on their habitat. I did not revise my criteria.

2. An adaptation is a structure or function that is common in a population because it enhances the ability to survive and reproduce in a particular environment. Provide one example and an explanation of one adaptation in the Anolis lizards. One adaptation is the short legs on the sheplani hispanola anole's lizard. I think this is because of the slim branches it was on. The shorter legs made it easier for the lizard to hold onto the slimmer branches.
3. Provide one evolutionary explanation for why lizards living in the same part of the habitat (i.e., grass) would have similar characteristics. Lizards in the same habitat would have similar characteristics because there are many ways to do something, however there is only one way that is the best for surviving. Basically, lizards in the same habitat have the characteristics that are most fit for survival, so most lizards in that habitat would exhibit those most fit characteristics.
4. What is an ecomorph? Provide one example from the virtual lab. Ecomorphs are species with similar body types and habitats. An example is how the sheplani Hispanola and occultus Puerto Rico lizards both have short legs

Lizards of Patagonia Mariana Morando, Luciano J. Avila, 2020-08-23 This book presents a critical and integrated review of lizards from Patagonia It summarizes the region's geomorphological history and climatic aspects which makes it possible to interpret from an evolutionary perspective the latest findings on the various natural history aspects of its lizard fauna As such the book will appeal to all researchers and professionals specialized in lizard ecology and evolution

Meiosis Peter Moens, 2012-12-02 Meiosis is a monograph focused on meiosis specific functions It presents a discussion on the genetic regulations of meiosis and aims to direct readers on future research by reporting a number of studies on progress The text is divided into four parts and consists of 12 chapters After an introduction to the meiotic process the first part of the book narrates the genetic transmission and the evolution of reproduction and parthenogenesis The second part presents the concepts of recombination the heteroduplex model and the genetic control of biochemical events in meiotic recombination The third part covers the information about the chiasmata and synaptonemal complex including the Rabl orientation The text is then concluded by the fourth part that covers the biochemical basis of meiosis The book is an excellent reference for undergraduate and graduate students in biological courses specifically in genetics biochemistry and cell developmental and molecular biology Lecturers researchers and other professionals in the same field will also find this book useful

Wildlife Review, 1995 **Copeia**, 1977 *Wildlife Research*, 2010 **Ecophysiological Analysis of Vulnerability to Climate Warming in Ectotherms** Lin Zhang, Buddhi Dayananda, Bao-jun Sun, Jigang Xia, 2023-07-25 Temperature plays a critical role in animal survival and climate warming is one of the greatest threats to global biodiversity in the future It is already affecting species and communities with severe impacts and it is predicted that climate warming will cause species extinctions and distributional shifts in the coming decades The impact of climate warming is expected to be particularly severe on ectothermic animals including fishes amphibians and reptiles Thus assessing species responses to ongoing climate warming and determining what conservation actions should be taken are among the most significant and controversial challenges for ecologists Identifying the most vulnerable species to extinction as a result of climate warming is an appropriate first step in mitigating the impacts of a changing world An organism's vulnerability to climate warming depends on its sensitivity to environmental changes its exposure to the change and its ability to recover from and potential to adapt to change The interaction of these factors makes predicting the effects of climate warming on species a complex and major challenge for ecologists Developing a deeper knowledge of ectotherms vulnerability to climate warming is crucial to enhance our understanding of extinction processes and significantly contribute to conservation efforts by guiding the implementation of better policies and management strategies to prevent the extinction of remaining populations Investigations of climate warming vulnerability are likely to benefit from measurements of environmental conditions taken at the scale at which organisms experience them Therefore the main objective of this interdisciplinary Research Topic is to bring together

research on how ectotherms respond to climate warming at various levels We will particularly focus on the life history energy strategy physiological response etc We encourage inter and multidisciplinary research approaches linking molecular biology thermal physiology and ecology behavioral ecology functional ecology evolutionary genetics and bioenergetics **Anguid Lizards of the Genus Abronia** Jonathan A. Campbell, Darrel R. Frost, 1993 We establish that *Abronia vasconcelosii* is a junior synonym of *A. aurita* *Abronia fimbriata* is resurrected from the synonymy of *A. aurita* and shown to be one of the most distinctive species in the genus *Abronia* *gaiophantasma* and *A. anzuetoi* are described respectively from the cloud forest of the western Sierra de las Minas Department of Baja Verapaz Guatemala and the southern Pacific slope of the Volc n de Agua Department of Escuintla Guatemala These species had previously been confused with *A. aurita* and *A. vasconcelosii* Respectively *Abronia smithi* a new species from the Pacific versant of Chiapas Mexico and *A. leurolepis* a new species from the Atlantic versant of Chiapas Mexico are described and distinguished from *A. ochoterenai* from the Atlantic versant of Chiapas Mexico with which they had previously been confused A more detailed diagnosis of *A. matudai* of the Pacific versant of Guatemala and Chiapas Mexico is provided *Abronia kalaina* is placed in the synonymy of *A. fuscolabialis* and specimens previously reported as *A. montecristoi* from Honduras are shown to be representatives of *A. salvadorensis* We address the taxonomic history and provide synonymies and diagnoses for each of the problematical species The natural history conservation biology and phylogeny of *Abronia* are discussed The use of intraspecifically variable characters in phylogenetic inference is addressed and alternative approaches to analysis are compared 1 a reference approach in which only fixed characters are employed i e all transformation series that contain polymorphic cells in the data matrix are excluded 2 a baseline approach in which polymorphisms are optimized onto the resulting cladograms but polymorphism is not allowed on interior stems 3 an any instance approach in which only a priori apomorphies are coded regardless of frequency 4 an unscaled minimum turnover approach in which all character matches count equally a priori and origination of apomorphies is minimized and 5 a scaled approach in which the transformation diameter from fixed plesiomorphy direct to fixed apomorphy is the same as from fixed plesiomorphy to variable within a terminal taxon to fixed apomorphy A priori weighting of characters that exhibit no intrapopulational polymorphism over those showing polymorphism is done in order to evaluate the signal inherent in intraspecifically variable characters as well as characterization problems Successive approximations is evaluated as a means of increasing the signal to noise ratio in data analysis The technique recommended for incorporating intraspecifically variable morphological characters into a phylogenetic analysis is an unscaled minimum turnover approach combined with successive approximations P 4 *The Ecology of Natural Disturbance and Patch Dynamics* Bozzano G Luisa, 2012-12-02 *The Ecology of Natural Disturbance and Patch Dynamics* brings together the findings and ideas of researchers studying such varied systems as marine invertebrate communities grasslands and boreal temperate and tropical forests The primary goal is to present a synthesis of diverse individual contributions The book is divided into three main

sections 1 examples of patch dynamics in diverse systems 2 adaptations of organisms and evolution of populations in patch dynamic environments and 3 implications of patch dynamics for the organization of communities and the functioning of ecosystems This approach demonstrates the commonality of disturbance generated phenomena over a wide range of scales and levels of organization and thus validates the broad applicability of the patch dynamic viewpoint The book presents a framework that can stimulate the generation of explicit hypotheses and theory and forms an alternative to equilibrium concepts of the evolution of populations composition of communities and functioning of ecosystems **Journal of**
