Concepts within the Disciplines brings together leading writers from various disciplines and national contexts in an  
important and readable volume for all those concerned with teaching and learning in higher education The foundational  
principle of threshold concepts is that there are in each discipline conceptual gateways or portals that must be negotiated to  
arrive at important new understandings In crossing the portal transformation occurs both in knowledge and subjectivity Such  
transformation involves troublesome knowledge a key concern for contributors to this book who identify threshold concepts  
in their own fields and suggest how to deal with them Part One extends and enhances the threshold concept framework  
containing chapters that articulate its qualities its links to other social theories of learning and other traditions in educational  
research Part Two encompasses the disciplinary heart of the book with contributions from a diversity of areas including  
computing engineering biology design modern languages education and economics In the many empirical case studies  
educators show how they have used the threshold concept framework to inform and evaluate their teaching contexts Other  
chapters emphasise the equally important being and becoming dimension of learning Part Three suggests pedagogic  
directions for those at the centre of the education project with contributions focusing on the socialisation of academics and  
their continuing quest to be effective teachers The book will be of interest to disciplinary teachers educational researchers  
and educational developers It also is of relevance to issues in quality assurance and professional accreditation
