*Handbook of Geometry and Topology of Singularities V: Foliations* Felipe Cano, José Luis Cisneros-Molina, Lê Dũng Tráng, José Seade, 2024-06-05 This is the fifth volume of the Handbook of Geometry and Topology of Singularities a series which aims to provide an accessible account of the state of the art of the subject its frontiers and its interactions with other areas of research Singularities are ubiquitous in mathematics and science in general and singularity theory is a crucible where different types of mathematical problems converge surprising connections are born and simple questions lead to ideas which resonate in other parts of the subject and in other subjects This Volume V focuses on singular holomorphic foliations which is a multidisciplinary field and a whole area of mathematics in itself Singular foliations arise for instance by considering The fibers of a smooth map between differentiable manifolds with singularities at the critical points The integral lines of a vector field or the action of a Lie group on a manifold The singularities are the orbits with special isotropy The kernel of appropriate 1 forms The singularities are the zeros of the form Open books which naturally appear in singularity theory as foliations with singular set the binding These important examples highlight the deep connections between foliations and singularity theory This volume like its companion Volume VI also focused on foliations consists of nine chapters authored by world experts which provide in depth and reader friendly introductions to some of the foundational aspects of the theory These introductions also give insights into important lines of further research The volume starts with a foreword by one of the current world leaders in the theory of complex foliations The book is addressed to graduate students and newcomers to the theory as well as to specialists who can use it as a guidebook

The Method of the Generalised Eikonal Michael V. Vesnik, 2015-07-24 Diffraction theory describes scattering mechanisms for waves of various physical nature scattered by objects of different shapes and materials This book proposes new methods to account for the contour shape edge profile and boundary conditions of three dimensional scatterers in particularly flat polygons and polyhedrals A standard method to refine the physical optics approximation PO is the heuristic method of edge waves MEW In comparison with MEW the presented approaches simplify the solving and refining the PO approximation without solving a corresponding two dimensional problem Furthermore these methods allow to take into account the field perturbation in the vicinity of vertices While the analytical formulas obtained by using these new approaches are as simple as in the PO case the accuracy can be even higher than for MEW On the basis of the developed methods construction of solutions for wave propagation in urban area and elastic wave diffraction including seismic waves are proposed The book is useful for specialists who solve scientific and engineering problems in wave propagation and for students and postgraduate students
