**Advances in Fluid-Solid Coupling Processes between Fractures and Porous Rocks: Experimental and Numerical Investigation** Shiming Wei,Peng Tan,Xiang Rao,Yang Xia,Meng Meng,Yuhan Huang,Bamidele Victor Ayodele, Hydraulic fracturing is the key measure for improving recovery of unconventional oil and gas reservoirs Prediction of fracture morphology and productivity after fracturing is critical for fracturing design and optimization The hydraulic fracturing process is to open porous rocks by artificially injecting highly compressed fluid and the hydraulic fracture will be closed under the compaction of in situ stress during the production process In this regard hydraulic fracturing and production processes are both fluid solid coupling processes involving fractures and porous rocks This Research Topic aims to gather the latest studies addressing how to improve the prediction accuracy of hydraulic fracturing morphology and post fracturing productivity through experimental and numerical investigation The experimental research shall underline hydraulic fracturing and fracture conductivity experiments and associated experimental methods while the numerical research shall pay particular attention to discrete fracture network models including the calculation efficiency and accuracy as well as the applicability Te HS&T J Holt Rinehart & Winston,Holt, Rinehart and Winston Staff,2004-02 God and Gaia Michael S Northcott,2022-12-22 God and Gaia explores the overlap between traditional religious cosmologies and the scientific Gaia theory of James Lovelock It argues that a Gaian approach to the ecological crisis involves rebalancing human and more than human influences on Earth by reviving the ecological agency of local and indigenous human communities and

of nonhuman beings Present day human ecological influences on Earth have been growing at pace since the Scientific and Industrial Revolutions when modern humans adopted a machine cosmology in which humans are the sole intelligent agency The resultant imbalance between human and Earthly agencies is degrading the species diversity of ecosystems causing local climate changes and threatens to destabilise the Earth as a System Across eight chapters this ambitious text engages with traditional cosmologies from the Indian Vedas and classical Greece to Medieval Christianity with case material from Southeast Asia Southern Africa and Great Britain It discusses concepts such as deep time and ancestral time the ethics of genetic engineering of foods and viruses and holistic ecological management Northcott argues that an ontological turn that honours the differential agency of indigenous humans and other kind and that draws on sacred traditions will make it is possible to repair the destabilising impacts of contemporary human activities on the Earth System and its constituent ecosystems This book will be of considerable interest to students and scholars of the environmental humanities history and cultural and religious studies
