# LAMINATED PAPER IN THE RECYCLING PROCESS

nobelus  
RECYCLED PAPER

## 1 COLLECTION

Laminated paper and packaging, such as folded cartons and boxes, are placed into curbside bins or public containers. These materials will be combined with paper from other recycling bins in large containers.

## 2 SORTING & SELECTION

Laminated paper products are taken to a Materials Recovery Facility (MRF) alongside other recycled paper for sorting and baling. Paper mills then choose which types of materials they will purchase and bring them to the mill for quality inspection and further sorting.

## 3 SHREDDING & REPULPING

At this point, some paper mills may choose to shred materials to facilitate the repulping process. Approved materials, both shredded and whole, are sent to a large repulping chamber filled with water and chemicals where they are beaten into a slurry to loosen individual paper fibers.

## 4 REMOVING IMPURITIES & FIBERS

Now that the paper fibers are separated from other materials in the chamber, the pulp is sent through a series of separators and cleaning methods to filter out impurities, such as ink, staples, thin paper product too small to be usable, and laminates. At this stage, laminates are sent to the landfill, but recovered paper fiber is retained for processing.

## 5 PROCESSING PAPER FIBERS

The isolated paper fibers are blended with additives and materials to create specific paper products. The mixture is poured onto a conveyor belt, flattened by rollers, and dried before being wound into large rolls for sale and further processing.
