**Planning and design handbook on precast building structures** FIB - Féd. Int. du Béton,2014 In 1994 fib

Commission 6 Prefabrication edited a successful Planning and Design Handbook that ran to approximately 45 000 copies and was published in Spanish and German Nearly 20 years later Bulletin 74 brings that first publication up to date It offers a synthesis of the latest structural design knowledge about precast building structures against the background of 21st century technological innovations in materials production and construction With it we hope to help architects and engineers achieve a full understanding of precast concrete building structures the possibilities they offer and their specific design philosophy It was principally written for non seismic structures The handbook contains eleven chapters each dealing with a specific aspect of precast building structures The first chapter of the handbook highlights best practice opportunities that will enable architects design engineers and contractors to work together towards finding efficient solutions which is something unique to precast concrete buildings The second chapter offers basic design recommendations that take into account the possibilities restrictions and advantages of precast concrete along with its detailing manufacture transport erection and serviceability stages Chapter three describes the precast solutions for the most common types of buildings such as offices sports stadiums residential buildings hotels industrial warehouses and car parks Different application possibilities are explored to teach us which types of precast units are commonly used in all those situations Chapter four covers the basic design principles and systems related to stability Precast concrete structures should be designed according to a specific stability concept unlike cast in situ structures Chapter five discusses structural connections Chapters six to nine address the four most commonly used systems or subsystems of precast concrete in buildings namely portal and skeletal structures wall frame structures floor and roof structures and architectural concrete facades In chapter ten the design and detailing of a number of specific construction details in precast elements are discussed for example supports corbels openings and cutouts in the units special features related to the detailing of the reinforcement and so forth Chapter eleven gives guidelines for the fire design of precast concrete structures The handbook concludes with a list of references to good literature on precast concrete construction

*Timber Connections* Rohana Hassan,Azmi Ibrahim,Zakiah Ahmad,2023-04-19 This book describes the application of mathematical and fundamental theory as stated in the relevant standards namely EYM and NDS Timber is one of the important building materials in the field of engineering other than concrete and steel However there is still a lot of unexplored knowledge about timber including how timber connections are made One of the main types of timber connection is mortise and tenon Mortise and tenon are widely seen as one of the most important traditional timber structural joint In order to understand the load carrying capacity and performance of the structural mortise and tenon joint the existing

theoretical background of timber joint design is made as a reference Current equations applicable in estimating the load carrying capacity of timber joint uses the European Yield Model EYM Therefore the main aim of this book is to share the basic design knowledge inclusive of safety factor limitations as engineering main factor in structural design The Architects' Journal ,1998 **Stress Determination for Fatigue Analysis of Welded Components** E. Niemi,1995-04-30 This report introduces definitions of the terminology relevant to stress determination for fatigue analysis of welded components The various stress concentrations stress categories and fatigue analysis methods are defined Fatigue analysis methods considered are nominal stress hot spot stress notch stress notch strain and fracture mechanics approaches The report also contains comprehensive recommendations concerning the application of finite element methods and experimental methods for stress determination It is intended for fatigue design of common welded structures such as cranes excavators vehicle frames bridges ship hulls offshore structures etc fabricated from materials at least 3mm thick In general attention is focused on weld details which give rise to fatigue cracking from the surface notably from the weld toe Metals Abstracts ,1999-04 The British National Bibliography Arthur James Wells,2009 **Whitaker's Books in Print** ,1998 *Yearbook of International Organizations 2004/2005* Union of International Associations,2004 Subject Guide to Books in Print ,1997 Advances in Marine Structures Carlos Guedes Soares,Wolfgang Fricke,2011-03-14 In recent years significant advances have been made in the development of methods and modeling procedures for structural assessment of marine structures Various assessment methods are incorporated in the methods used to analyze and design efficient ship structures as well as in the methods of structural reliability to be used to ensure the safety Timber Bridges Christopher J. Mettem,2013-04-15 Bridges built in timber are enjoying a significant revival both for pedestrian and light traffic and increasingly for heavier loadings and longer spans Timber s high strength to weight ratio combined with the ease and speed of construction inherent in the off site prefabrication methods used make a timber bridge a suitable option in many different scenarios This handbook gives technical guidance on forms materials structural design and construction techniques suitable for both small and large timber bridges Eurocode 5 Part Two BS EN 1995 2 for the first time provides an international standard for the construction of timber bridges removing a potential obstacle for engineers where timber construction for bridges has not in recent centuries at least been usual Clearly illustrated throughout this guide explains how to make use of this oldest construction material in a modern context to create sustainable aesthetically pleasing practical and durable bridges Worldwide examples include Tourand Creek Bridge Canada Toijala Finland Punt la Resgia Switzerland Pont de Crest France Almorere Pylon Bridge the Netherlands **Information Sources in Engineering** Ken W.
