Introducing Financial Statements

QUESTIONS

Q2-1. An asset represents resources a company owns or controls. Assets should provide future economic benefits. Assets arise from past events or transactions. A liability is an obligation that will require a future economic sacrifice. Equity is the difference between assets and liabilities. It represents the claims of the company's owners to its income and assets. The following are some examples of each:

| | |
|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Assets | <ul style="list-style-type: none">• Cash• Receivables• Inventories• Plant, property and equipment (PPE) |
| Liabilities | <ul style="list-style-type: none">• Accounts payable• Accrued liabilities• Deferred revenue• Notes payable• Long-term debt |
| Equity | <ul style="list-style-type: none">• Contributed capital (common and preferred stock)• Additional paid-in capital• Retained earnings• Accumulated other comprehensive income• Treasury stock |

Q2-2. A cost that creates an immediate benefit is reported on the income statement as an expense. A cost that creates a future benefit is added to the balance sheet as an asset (capitalized) and will be transferred to the income statement as the benefit is realized. For example, PPE creates a future benefit and the cost of the PPE is transferred to the income statement (as depreciation expense) over the life of the PPE.
