Genesys Java Developers Guide:

   Construction and Evolution of Code Generators Sven Jörges,2013-01-12 Automatic code generation is an essential cornerstone of model driven approaches to software development Currently lots of techniques are available that support the specification and implementation of code generators such as engines based on templates or rule based transformations All those techniques have in common that code generators are either directly programmed or described by means of textual specifications This monograph presents Genesys a general approach which advocates the graphical development of code generators for arbitrary source and target languages on the basis of models and services In particular it is designed to support incremental language development on arbitrary metalevels The use of models allows building code generators in a truly platform independent and domain specific way Furthermore models are amenable to formal verification methods such as model checking which increase the reliability and robustness of the code generators Services enable the reuse and integration of existing code generation frameworks and tools regardless of their complexity and at the same time manifest as easy to use building blocks which facilitate agile development through quick interchangeability Both models and services are reusable and thus form a growing repository for the fast creation and evolution of code generators   **Leveraging Applications of Formal Methods, Verification and Validation.
