### Covid-19 ELISA Assay

An enzyme-linked immunosorbent assay (ELISA) is used to detect the concentration of antigens in a sample. An ELISA is performed using a microplate with wells. For Covid-19 testing, the bottom of each well is coated with a Covid-19 antigen, or a protein that is part of the virus. A patient's sample is added to the well, incubated, and then washed off. This way, the proteins in the sample that can bind to the Covid-19 antigen will remain in the well, while those that do not bind can be removed. Next, an HRP tracer antibody is added to the well. The tracer antibody will bind to the human proteins that remained in the well. A second wash is necessary to remove any unbound antibodies. Lastly, a substrate solution is added to the well. This substrate solution reacts with the immunocomplex made up of the Covid-19 antigen linked to the human proteins, linked to the tracer antibody. This reaction produces a color change. It is timed and once it reaches peak enzymatic activity, a stop solution is added to make the color change permanent. The concentration of Covid-19 proteins present in the human sample can be determined by the absorbance of the sample, using a spectrophotometer. Finally, a calibration curve is used to calculate the concentration of the sample and determine if it is positive or negative for Covid-19.

The explosion of basic and applied immunology in the first decades of the 21st century has brought forth new opportunities and challenges for immunology education at all academic levels from professional to undergraduate medical graduate and post graduate instruction Moreover developing methods and techniques for educating general audiences on the importance and benefits of immunology will be critical for increasing public awareness and support One major immediate challenge consists in accommodating within the confines of traditional immunology curricula a body of knowledge that continues to grow exponentially in both size and complexity Furthermore the practical toolbox of immunological research has vastly expanded and even in the present environment of highly interdisciplinary and collaborative science future immunologists will likely need to be at least conversant in for instance computational structural and system biology nanotechnology and tissue engineering At the same time our perspective of the immune system has progressively developed from primarily a host defense mechanism to a fundamental homeostatic system with organism wide physiological and clinical significance and with potentially transformative biotechnological and therapeutic applications As a consequence in addition to stand alone courses immunology is increasingly integrated into other courses or distributed longitudinally throughout a multi year curriculum This necessitates inter disciplinary approaches to reach an expanding range of disciplines as diverse as neurobiology cancer biology oncology infectious diseases pharmacology orthopedics and bioengineering Creative approaches and pedagogical flexibility will be needed to avoid the pitfall of one size fits all instruction and to tailor level and discipline appropriate content to different types of students using multiple teaching formats Finally like most other disciplines immunology education is also under strong pressure to introduce new didactic strategies that are relevant and meaningful to a generation of students who are digital natives comfortable with and expect on demand and multi modal learning diversified sources and active engagement Thankfully the dynamic and interactive behavior of immune system cells now visualized with striking immediacy by in vivo imaging has the ability to capture and hold the interest of even the most jaded learner The need for an increasingly immunology knowledgeable workforce not just academic and industry scientists but also clinical and research lab technicians biomedical engineers and physicians in a growing array of specialties will also expand job opportunities for immunologists as educators and for content creators dedicated to generating new didactic tools in this field
