

WORKSHEET: STRUCTURE AND FUNCTION OF THE PLASMA MEMBRANE

The plasma membrane is a vital component of all cells. It separates the cell contents from the extracellular environment and controls the movement of substances into and out of the intracellular space.

Task 1

Define the term semipermeable.

Task 2

Use the following terms to label the diagram of the plasma membrane.

- Extracellular space
- Intracellular space
- Cytoskeleton
- Phospholipid molecule
- Phospholipid bilayer
- Cholesterol
- Peripheral protein
- Transmembrane glycoprotein
- Glycolipid
- Hydrophobic region
- Hydrophilic region
- Carbohydrate molecule
- Channel protein

Andreoli,Darrell D. Fanestil,Joseph F. Hoffman,Stanley G. Schultz,2013-11-11 The second

edition of Physiology of Membrane Disorders represents an extensive revision and a considerable expansion of the first edition. Yet the purpose of the second edition is identical to that of its predecessor, namely to provide a rational analysis of membrane transport processes in individual membranes, cells, tissues, and organs, which in turn serves as a frame of reference for rationalizing disorders in which derangements of membrane transport processes play a cardinal role in the clinical expression of disease. As in the first edition, this book is divided into a number of individual but closely related sections. Part V represents a new section where the problem of transport across epithelia is treated in some detail. Finally, Part VI, which analyzes clinical derangements, has been enlarged appreciably.

THE EDITORS
xi Preface to the First Edition
The purpose of this book is to provide the reader with a rational frame of reference for assessing the pathophysiology of those disorders in which derangements of membrane transport processes are a major factor responsible for the clinical manifestations of disease. In the present context, we use the term membrane transport to refer to those molecular processes whose cardinal function, broadly speaking, is processes in a catholic sense, the vectorial transfer of molecules either individually or as ensembles across biological interfaces, the latter including those interfaces which separate different intracellular compartments, the cellular and extracellular compartments, and secreted fluids such as glomerular filtrate and extracellular fluids.
