Order a line to attach the magnetic items

nature. Magnets are rocks or metals that have an invisible field around them. They can attract other magnets and certain metals like iron. Many metals are not magnetic. Silver, gold, aluminum, and copper are non-magnetic metals. The magnetic objects must be close to one another to work. Magnets have two poles on either end of the magnet, the north pole and the south pole. The poles are the strongest part of the magnet. Like poles repel. Repel means to push apart. If you place both south ends of a magnet near each other, they will push apart. Opposites attract which means to pull together. If you place a north and a south pole near each other they will pull together.

Look at the arrows above the magnets and determine if they are attracting or repelling. Write N for north or S for south to show which poles are facing each other.

Items to be attached to a magnet:

- Metal
- Iron
- Glass
- Paper
- Plastic
