

# Filter

- Filtering is a way that we can use Excel to quickly extract certain data from our spreadsheet. Unlike sorting, filtering doesn't just reorder the list. It actually hides the rows or columns containing data that do not meet the filter criteria we define. Excel has an AutoFilter feature that makes it very easy to extract data from our spreadsheet. After filtering data, we can copy, find, edit, format, chart, and print the subset of filtered data without rearranging or moving it.
- In Excel 2010, if we're using an Excel Table, it has built-in filtering features. If the data is not in an Excel Table, we can bring it up from **Filter** under **Sort & Filter** in **Data Tab**.
- We can also filter by more than one column. Filters are additive, which means that each additional filter is based on the current filter and further reduces the subset of data
