

The figure below shows the three types of survivorship curves.

| Label | Type I, II, or III? | Description of strategy | Example organisms that use this strategy |
|-------|---------------------|--|---|
| A | Type I | Organisms have very low offspring and take very good care of them to ensure their survival. High survival at young, decreases as they age. | Large mammals (ex. humans, elephants, horses, whales, whales) |
| B | Type II | Organisms equally likely to die at any point throughout their life. | Small mammals (ex. Squirrels), Fringing birds, Lizards |
| C | Type III | Organisms have many offspring and do not invest much care to ensure they survive. | Fish, some insects small plants |

What is meant by population distribution?

To illustrate the three main population distribution patterns could be seen in the table below:

| Type of distribution | Picture of distribution | Why use this pattern? |
|----------------------|---|---|
| Clumped |  | VERY COMMON Safety in numbers, social interactions, mating and caring for young, resources are clumped. |
| Dispersed |  | Scarcity of resources, variability. |
| Random |  | VERY COMMON It's random (ex. food is taken by birds, and birds are dispersed in random locations). |
