Arthur Conklin,2014-10-31 Practice the Computer Security Skills You Need to Succeed 40 lab exercises challenge you to solve problems based on realistic case studies Step by step scenarios require you to think critically Lab analysis tests measure your understanding of lab results Key term quizzes help build your vocabulary Labs can be performed on a Windows Linux or Mac platform with the use of virtual machines In this Lab Manual you ll practice Configuring workstation network connectivity Analyzing network communication Establishing secure network application communication using TCP IP protocols Penetration testing with Nmap metasploit password cracking Cobalt Strike and other tools Defending against network application attacks including SQL injection web browser exploits and email attacks Combatting Trojans man in the middle attacks and steganography Hardening a host computer using antivirus applications and configuring firewalls Securing network communications with encryption secure shell SSH secure copy SCP certificates SSL and IPsec Preparing for and detecting attacks Backing up and restoring data Handling digital forensics and incident response Instructor resources available This lab manual supplements the textbook Principles of Computer Security Fourth Edition which is available separately Virtual machine files Solutions to the labs are not included in the book and are only available to adopting instructors

Real-Time Environmental Monitoring Miguel F. Acevedo,2023-09-29 Written 10 years after the publication of the first edition this updated edition of Real Time Environmental Monitoring Sensors and Systems introduces the fundamentals of environmental monitoring based on electronic sensors instruments systems and software that allow continuous and long term ecological and environmental data collection It accomplishes two objectives explains how to use sensors for building more complex instruments systems and databases and introduces a variety of sensors and systems employed to measure environmental variables in air water soils vegetation canopies and wildlife observation and tracking

This second edition is thoroughly updated in every aspect of technology and data and each theoretical chapter is taught parallel with a hands on application lab manual Emphasizes real time monitoring as an emerging area for environmental assessment and compliance and covers the fundamentals on how to develop sensors and systems Presents several entirely new topics not featured in the first edition including remote sensing and GIS machine learning weather radar and satellites groundwater monitoring spatial analysis and habitat monitoring Includes applications to many environmental and ecological systems Uses a practical hands on approach with the addition of an accompanying lab manual which students can use to deepen their understanding based on the author s 40 years of academic experience Intended for upper level undergraduate and graduate students taking courses in civil and environmental engineering electrical engineering mechanical engineering geosciences and environmental sciences as well as professionals working in environmental services and researchers and academics in engineering

The Internet for Molecular Biologists Clare E. Sansom,Robert M. Horton,2004-01-29 The last few

decades of the twentieth century will be remembered for two technological revolutions that have already had a profound effect on millions of people's lives. Thanks to communication technologies and particularly the Internet we now take immediate access to enormous quantities of information for granted. And thanks to the new biology building on the genome projects some scientists are predicting that cures for the majority of known diseases could be readily available within two generations. These two revolutions are inextricably linked: molecular biology depends on the ready availability of data and that needs computers and the Internet. There are some surprising parallels between developments in the two technologies. For example, the publicly available gene sequence databases EMBL and GenBank are doubling in size approximately every eighteen months. According to Moore's Law, which has held since the invention of the silicon chip, eighteen months is also the time frame in which computer power is expected to double. This book aims to help the practitioners of the second revolution, molecular biologists who are more at home at a laboratory bench than in front of a computer keyboard, to use the technology of the first, the Internet, more effectively.

The Internet For Molecular Biologists: A Practical Approach provides a broad introduction to using Internet-based computing resources to support research in molecular biology. After surveying the core databases and other online resources, the focus shifts to tools and techniques for exploiting and authoring Internet distributed information. Later chapters provide detailed examples of how technologies such as molecular visualisation, VRML and XSLT can be applied to biological problems.
