

CHAPTER 7 – URINARY SYSTEM

"NOTE" You will be tested on spelling on your second, third, fourth, and fifth exams, so you want to be mindful of the correct spelling of these terms as you are going through them

Anatomy of the Major Organs:

You need to review the anatomy looking at the major organs, and correlate the organs with the combining forms for each of the body parts.

- For example ren/o and nephr/o both mean **kidney**
- We have various parts of the kidney, for example the outer region is the **cortex**, the inner region is the **medulla**, and the **hilum** is a specific area in the center or medial border of the kidney where the blood vessels and nerves enter and leave
 - Your lungs also have a similar location; we refer to the area where the blood vessels enter and exit, as well as the bronchial tube as the hilum of the lung.
- The **ureters**, these are the 2 tubes that extend from the kidney to the bladder
- The **urinary bladder** has a couple of combining forms, vesic/o and cyst/o
- The **trigone** is the triangular region at the base of the bladder where the ureters enter and the urethra exists
- The **urethra** is the one tube that carries urine from the bladder to the outside of the body
- Other terms covered in this chapter are **urination** or **voiding**, which is the process of expelling urine through the urethra
- The **urinary meatus**, if you remember the term meatus from anatomy is any opening to the outside of the body, here this is our urinary opening, the external opening of the urethra

Physiology: How the Kidneys Produce Urine

Your textbook has a flow diagram illustrating the process of forming and expelling urine. You need to focus on the major organs of the body. You don't have to focus on the information regarding the production of urine.

Vocabulary:

You need to know the following vocabulary terms listed in your textbook:

Vocabulary	Definition
Arteriole	Small artery
Catheter	Tube for injecting or removing fluid
Cortex	Outer region of the kidney
Glomerulus	Tiny ball of capillaries (microscopic blood vessels) in the kidney, the plural form is glomeruli
Hilum	Depression in an organ where blood vessels and nerves enter and leave
Kidney	One of the two bean-shaped organs on either side of the backbone in the lumbar region that filters nitrogenous wastes from the bloodstream to form urine
Meatus	Opening or canal
Medulla	Inner region of the kidney
Potassium (K⁺)	Electrolyte regulated by the kidney so that a proper concentration is maintained within the blood. Potassium is essential for allowing muscle contraction and conduction of nervous impulses
Renal artery	Blood vessel that carries blood to the kidney
