Before beginning a dissection, it is important to have an understanding of some of the basic directional terminology associated with the dissection of specimens.

**TASK:** List three safety precautions needed when doing the fetal pig dissection and state using a complete sentence the specific purpose of each precaution.

**TASK:** List the purpose of this lab.

### Procedure:

1. Place specimen in a dissection tray. Tie a piece of twine to a front and back leg. Pass the twine underneath the dissection pan to the other side and tie it to the leg on the opposite side to hold the legs apart.
2. Use a metric ruler to measure the length of your fetal pig. Use the information below to determine the approximate time from conception of your pig.

The period of pregnancy or gestation for pigs is 112-115 days (3 months, 3 weeks, 3 days) and each female may produce a litter of 7-12. As the period of development proceeds, the pig embryos get longer, so an approximate age may be calculated from the length. (from Odlaug: *Laboratory Anatomy of the Fetal Pig*, William C. Brown, 1955.)
