

HBS Unit 1 Study Guide: Identity

Use your past assignments and PLTW web-site to help you complete the study guide to help you for our first test. Please type your answers in a different color ink.

Lesson 1.1: Identity: Human

Essential Questions

1. In what ways do the parts of a human body system work together to carry out a specific function?
The parts of a human body system work together in ways such as the nerves sending signals to other nerves in various places to protect the body from harm and to send signals to do various functions.
2. In what ways do different human body systems work together to complete specific functions?
They can work together in ways such as the skeletal system and the muscular system helping each other make the body move, or the respiratory system and the circulatory system working together to circulate oxygenated blood throughout the body. All of these things help to maintain homeostasis.
3. How can directional terms and regional terms help describe location in the body?
They can help by pinpointing a certain area, such as the carpal, which in turn help you understand that the problem lies within that area.
4. What features of structure and function are common to all humans?
We all have the same systems (except, of course, for reproductive systems, which differ in males and females) which serve the same functions.

Key Terms-Define

Anterior the front of a structure, or a structure found toward the front of the body.
Deep away from the surface or further into the body
Directional Terms describe the positions of structures relative to other structures or locations in the body.
Distal a part of the body that is further away from the center of the body than another part.
Dorsal back
Inferior away from the head; lower
Lateral away from the midline of the body
Medial toward the midline of the body
Posterior back
Proximal toward or nearest the trunk or the point of origin of a part
Regional Terms anterior and posterior, dorsal and ventral, and lateral and medial
Superficial focuses on specific external and internal regions of the body and how different systems work together in that region.
Superior toward the head end of the body; upper
System The 11 organ
Ventral the front of the body

Activity 1.1.1: Amazing Facts

Conclusion

1. Describe an example that demonstrates how one human body system impacts the effectiveness of another.
The respiratory system impacts the effectiveness of the cardiovascular system because the lungs must function properly in order for the heart to pump oxygenated blood around the body.
2. Describe three body processes or functions that all humans have in common.
All humans are able to digest food for nutrients and energy (Digestive System), breathe to get oxygen (Respiratory System), and pee to get rid of wastes (Urinary System).
3. Provide an example of an individual difference that may impact the functioning of one of the human body systems.
Weight can impact the ability of the respiratory system to function. Obesity can negatively impact this system by adding unnecessary weight on top of the lungs, making breathing difficult.
