

IEEE Citation Style Guide

Any citation style is set up to give the reader immediate information about sources cited in the text. In IEEE citations, the references should be numbered and appear in the order they appear in the text. When referring to a reference in the text of the document, put the number of the reference in square brackets. Eg: [1]

The IEEE citation style has 3 main features:

- The author name is first name (or initial) and last. This differs from MLA style where author's last name is first.
- The title of an article (or chapter, conference paper, patent etc.) is in quotation marks.
- The title of the journal or book is in italics.

These conventions allow the reader to distinguish between types of reference at a glance. The correct placement of periods, commas and colons and of date and page numbers depends on the type of reference cited. Check the examples below. Follow the details exactly. Eg.: put periods after author and book title, cite page numbers as pp., abbreviate all months to the first three letters (eg. Jun.)

Check the distinctions between print and electronic sources (especially for journals) carefully.

Nonlinear Distortion in Wireless Systems Khaled M. Gharaibeh,2011-12-30 This book covers the principles of modeling and simulation of nonlinear distortion in wireless communication systems with MATLAB simulations and techniques In this book the author describes the principles of modeling and simulation of nonlinear distortion in single and multichannel wireless communication systems using both

deterministic and stochastic signals Models and simulation methods of nonlinear amplifiers explain in detail how to analyze and evaluate the performance of data communication links under nonlinear amplification The book addresses the analysis of nonlinear systems with stochastic inputs and establishes the performance metrics of communication systems with regard to nonlinearity In addition the author also discusses the problem of how to embed models of distortion in system level simulators such as MATLAB and MATLAB Simulink and provides practical techniques that professionals can use on their own projects Finally the book explores simulation and programming issues and provides a comprehensive reference of simulation tools for nonlinearity in wireless communication systems

Key Features Covers the theory models and simulation tools needed for understanding nonlinearity and nonlinear distortion in wireless systems Presents simulation and modeling techniques for nonlinear distortion in wireless channels using MATLAB Uses random process theory to develop simulation tools for predicting nonlinear system performance with real world wireless communication signals Focuses on simulation examples of real world communication systems under nonlinearity Includes an accompanying website containing MATLAB code This book will be an invaluable reference for researchers RF engineers and communication system engineers working in the field Graduate students and professors undertaking related courses will also find the book of interest

The Use of Computers in Radiation Therapy I. A. D. Bruinvis,1987 Hardbound Since the first conference in 1966 there has been an enormous change qualitatively as well as quantitatively in the application of computers in the field of radiotherapy The fast technical development has made applications possible that only a few people

dreamed of two decades ago There is now hardly any field in radiotherapy where computers have no task This book is a collection of papers dealing with all aspects of the use of computers in radiation therapy It contains contributions by the majority of international scientists working in this field and thus presents a fair account of the state of the art It is felt that a useful application of computers in radiotherapy is only possible by close cooperation of all disciplines involved New applications of computer software and hardware on the computation imaging process control and quality assurance of radiation treatments are discussed as are new developments in radiation dose calcula
