LINPACK Users' Guide J. J. Dongarra, J. R. Bunch, C. B. Moler, G. W. Stewart, 1979-01-01 The authors of this carefully structured guide are the principal developers of LINPACK a unique package of Fortran subroutines for analyzing and solving various systems of simultaneous linear algebraic equations and linear least squares problems This guide supports both the casual user of LINPACK who simply requires a library subroutine and the specialist who wishes to modify or extend the code to handle special problems It is also recommended for classroom work LINPACK J. LINPACK Working Note No. 9, 1977 LINPACK is a collection of Fortran programs for solving various types of linear systems The package is concerned with general banded symmetric indefinite symmetric positive definite triangular and tridiagonal square matrices as well as with least squares problems and the QR and singular value decompositions of rectangular matrices The routines are designed to be completely machine independent fully portable and to run at near optimum efficiency in most operating environments RWR **Management and Office Information Systems** Shi-Kuo Chang, 2012-12-06 Decision making is a very complex phenomenon Modern decision makers must deal with very complex problems which are constantly changing and often ill structured making modeling and analysis difficult In order to provide support for the decision makers computer based information systems are designed to collect store process and transport information Recent advances in computer technology data communications database systems office automation and

knowledge engineering have made possible the design of very sophisticated information systems. However, rapid technological advances also create many problems, not the least of which is the lack of integration among the various disciplines in information system design. Without such integration, a costly computer-based information system is at best partially useful and at worst totally useless. The aim of this book therefore is to examine the various issues involved in designing management information systems, decision support systems, and office information systems for increasing productivity and providing decision support. This book is the outcome of the Workshop on Management and Office Information Systems, which was organized by the Knowledge Systems Institute and held at Chicago, Illinois, from June 28 to 30, 1982. Twenty-seven papers from the working papers presented at that workshop were selected for inclusion in the present volume, which is organized into five parts: I organization structures and management; II decision support systems; III database systems; IV office information systems; and V systems and applications.

Learning MATLAB Walter Gander, 2015-11-21. This comprehensive and stimulating introduction to Matlab, a computer language now widely used for technical computing, is based on an introductory course held at Qian Weichang College, Shanghai University, in the fall of 2014. Teaching and learning a substantial programming language aren't always straightforward tasks. Accordingly, this textbook is not meant to cover the whole range of this high-performance technical programming environment, but to motivate first and second-year undergraduate students in mathematics and computer science to learn Matlab by studying representative problems, developing algorithms, and programming them in Matlab. While several topics are taken from the field of scientific computing, the main emphasis is on programming. A wealth of examples are completely discussed and solved, allowing students to learn Matlab by doing, by solving problems, comparing approaches, and assessing the proposed solutions.

Handbook of Parallel Computing and Statistics Erricos John Kontoghiorghes, 2005-12-21. Technological improvements continue to push back the frontier of processor speed in modern computers. Unfortunately, the computational intensity demanded by modern research problems grows even faster. Parallel computing has emerged as the most successful bridge to this computational gap, and many popular solutions have emerged based on its concepts.

A Journey through the History of Numerical Linear Algebra Claude Brezinski, Gérard Meurant, Michela Redivo-Zaglia, 2022-12-06. This expansive volume describes the history of numerical methods proposed for solving linear algebra problems from antiquity to the present day. The authors focus on methods for linear systems of equations and eigenvalue problems and describe the interplay between numerical methods and the computing tools available at the time. The second part of the book consists of 78 biographies of important contributors to the field. A Journey through the History of Numerical Linear Algebra will be of special interest to applied mathematicians, especially researchers in numerical linear algebra, people involved in scientific computing, and historians of mathematics.
