Jubran, 2024-10-22 This undergraduate textbook provides a comprehensive treatment of Euclidean and transformational geometries supplemented by substantial discussions of topics from various non Euclidean and less commonly taught geometries making it ideal for both mathematics majors and pre service teachers Emphasis is placed on developing students deductive reasoning skills as they are guided through proofs constructions and solutions to problems The text frequently emphasizes strategies and heuristics of problem solving including constructing proofs Where to begin How to proceed Which approach is more promising Are there multiple solutions proofs etc This approach aims not only to enable students to successfully solve unfamiliar problems on their own but also to impart a lasting appreciation for mathematics The text first explores at a higher level and in much greater depth topics that are normally taught in high school geometry courses definitions and axioms congruence circles and related concepts area and the Pythagorean theorem similarity isometries and size transformations and composition of transformations Constructions and the use of transformations to carry out constructions are emphasized The text then introduces more advanced topics dealing with non Euclidean and less commonly taught topics such as inversive hyperbolic elliptic taxicab fractal and solid geometries By examining what happens when one or more of the building blocks of Euclidean geometry are

altered students will gain a deeper understanding of and appreciation for Euclidean concepts To accommodate students with different levels of experience in the subject the basic definitions and axioms that form the foundation of Euclidean geometry are covered in Chapter 1 Problem sets are provided after every section in each chapter and include nonroutine problems that students will enjoy exploring While not necessarily required the appropriate use of freely available dynamic geometry software and other specialized software referenced in the text is strongly encouraged this is especially important for visual learners and for forming conjectures and testing hypotheses

The Geometric Supposer Judah L. Schwartz, Michal Yerushalmy, Beth Wilson, 2013-06-17 This volume is a case study of education reform and innovation using technology that examines the issue from a wide variety of perspectives It brings together the views and experiences of software designers curriculum writers teachers and students researchers and administrators Thus it stands in contrast to other analyses of innovation that tend to look through the particular prisms of research classroom practice or software design The Geometric Supposer encourages a belief in a better tomorrow for schools On its surface the Geometric Supposer provides the means for radically altering the way in which geometry is taught and the quality of learning that can be achieved At a deeper level however it suggests a powerful metaphor for improving education that can be played out in many different instructional contexts
