2 FAMILY HEALTH ASSESSMENT
A comprehensive family assessment provides a foundation to promote family health. Edelman & Mandle, C. L. (2011). This assessment of family health offers many approaches that involve getting to know the strengths and weaknesses of the family.

According to Stanhope & Lascaster (2010), the family nursing assessment is the cornerstone for family nursing interventions and systematic processes that are used to identify the family's developmental stages and risk factors. The Friedman Family Assessment Model (2003) provides guidelines for nurses to interview the structure and function of families. This paper will implement the Friedman Family Assessment Tool to assess the Harvey Family. Identify Data: The Harvey Family is a traditional family that is composed of 4 family members.

AH is the father and is a 39 year old black male with a college degree in business. He is a plant manager at a steel mill in Jackson, MS. Mrs. BH is also African American and is the mother of the family. She is 35 years old and teaches at one of the local high schools in Jackson, MS. Mr. and Mrs. Harvey have 2 kids. CH is a 13 year old girl who is in the 7th grade and has asthma. Her brother, DH, is 6 years old in the 1st grade with no present known medical history. The whole family takes weekend trips every other weekend. They enjoy hiking, amusement parks, computers, shopping, and site seeing.

Parents' perception is that they are hardworking, good citizens who strongly believe in God and their religious beliefs are Methodist. This family appears to be in good health and proud parents of 2 kids. The family strengths consist of a rich history of Methodist beliefs, strong family morals, and high levels of education for greater opportunities. Family Structure: This couple has been married for 15 years. According to the Friedman Family Assessment Model (2003), their present developmental stage would be family with adolescent / young child.

The extent of each of the parent's developmental task appears to be properly fulfilled. They both agree not to have any more children. They practice safe sex with one partner and have no history of sexually transmitted diseases. The general health of the immediate family is overall good. The family history of the extended family denotes grandparents with hypertension and a few members who suffer with asthma. The father was diagnosed with hypertension and the mother denied any medical history except for a tubal ligation. The paternal grandfather (GH) is 75 years old and suffers from hypertension and is a heavy smoker.

Child and Family Assessment in Social Work Practice Sally Holland, 2010-11-15 This thoroughly revised and updated second edition of *Child and Family Assessment in Social Work Practice* is an essential guide for social work students and practitioners involved in the assessment of children and their families. Focusing on core assessments and guiding the reader through the complexities of conducting assessments of need and risk, the book now includes within each chapter a range of specifically tailored exercises and focus points which encourage readers both to reflect on what they have learnt and to understand how they can apply that learning to practice. Placing a strong emphasis on good evidence based assessment practice, Sally Holland has also for this new edition included original research evidence from a wide range of up to date research studies which are relevant to today's practice and which aim to promote a critical and reflective approach to the assessment process. The book is divided into three parts: Part 1 explores different approaches to assessment work, outlining policy changes and their implications for working with children and their families; Part 2 studies those involved in child and family assessments, children and their parents, and the relationship between the assessors and the assessed; Part 3, a more practical guide, outlines the actual process of an assessment, illustrated by case studies, focusing on planning, assessment methods, analysis, reporting, and critical evaluation. Accessibly relating theory and research to actual practice through the use of case studies, exercises, and suggestions for good practice and further reading, this book has a student friendly structure. It will be an invaluable resource for practitioners and academics across the field of social welfare, particularly for those embarking on or already involved in child and family assessment.

Family Assessment Form Children's Bureau of Southern California, 1997 The primary challenge of delivering and evaluating family based services lies in successfully assessing changes in families. This guide provides instruction for use of the Family Assessment Form (FAF), an instrument to help practitioners assess families at the beginning of service, develop individualized family service plans, monitor family progress, and assess outcomes for individual families. The FAF is designed as a standardized form that is adaptable for a variety of clinical, procedural, and program needs. Using a 9 point rating scale for individual items, the FAF enables practitioners to complete a psychosocial assessment of six areas of family functioning that is recorded in a quantitative manner and allows for monitoring family progress. The six areas of family functioning assessed by the FAF are: 1. living conditions, 2. financial conditions, 3. support available to caregivers, 4. interactions between caregivers and children, 5. developmental stimulation available to children, and 6. interactions between adult caregivers. The instruction guide provides a rationale for family assessment, details the development of the FAF, describes the FAF, provides information on training individuals to administer the instrument, describes the use of the FAF for program evaluation, discusses its test reliability and validity, and contains instructions for completing the FAF. A complete copy of the instrument is contained in the guide, including the face sheet, the family functioning factors section, caregiver history and characteristics section, behavior concerns
