**Blind Obedience** Meredith Williams, 2009-12-21 There is considerable debate amongst philosophers as to the basic philosophical problem Wittgenstein is attempting to solve in *Philosophical Investigations* In this bold and original work Meredith Williams argues that it is the problem of normative similarity In *Blind Obedience* Williams demonstrates how Wittgenstein criticizes traditional representationalist theories of language by employing the master novice distinction of the learner arguing that this distinction is often overlooked but fundamental to understanding philosophical problems about mind and language The book not only provides revealing discussions of Wittgenstein's corpus but also intricate analyses of the work of Brandom Dummett Frege Sellars Davidson Cavell and others These are usefully compared in a bid to better situate Wittgenstein's non intellectualist non theoretical approach and to highlight its unique features

Quantitative Determination of Engine Water Ingestion P. Parikh, 1986 This report describes a non intrusive optical technique for determination of liquid mass flux in a droplet laden airstream The technique was developed for quantitative determination of engine water ingestion resulting from heavy rain or

wheel spray Independent measurements of the liquid water content LWC of the droplet laden airstream and of the droplet velocities were made at the simulated nacelle inlet plane for the liquid mass flux determination The liquid water content was measured by illuminating and photographing the droplets contained within a thin slice of the flow field by means of a sheet of light from a pulsed laser A fluorescent dye introduced in the water enhanced the droplet image definition The droplet velocities were determined from double exposed photographs of the moving droplet field The technique was initially applied to a steady spray generated in a wind tunnel It was found that although the spray was initially steady the aerodynamic breakup process was inherently unsteady This resulted in a wide variation of the instantaneous liquid water content of the droplet laden airstream The standard deviation of ten separate LWC measurements was 31 percent of the average However the liquid mass flux calculated from the average LWC and droplet velocities came within 10 percent of the known water ingestion rate Keywords Engine water ingestion wheel spray turbojet engines flow measurement aircraft engines
