1. Define each of the following key terms - baroreceptors, tachycardia, bradycardia, collateral circulation, diastole, systole, murmur, pulse, blood pressure, systolic pressure, diastolic pressure
2. Define each of the following key terms - cardiac output, stroke volume, peripheral resistance, electrocardiogram, echocardiogram, angiography, troponin, cholesterol, atherosclerosis, arteriosclerosis, arrhythmia, cardiac anomaly.
3. What is blood pressure? What is the role of the sympathetic nervous system, the pituitary gland, and the adrenal gland in the control of BP? See page 238-39
Blood pressure is the pressure of blood against the walls of the arteries of the body. It is dependent upon cardiac output (the amount of blood that is ejected by a ventricle in one minute) and peripheral resistance (the amount of resistance that blood meets as it is being pumped out of the heart into the vessels). The sympathetic nervous system helps to regulate this by stimulating vasoconstriction to increase blood pressure or by not stimulating this vasoconstriction which results in vasodilation and lowering of blood pressure. The pituitary also plays a role because it secretes more or less ADH to increase or decrease blood volume. The adrenal gland also secretes aldosterone, another hormone that can increase or decrease blood volume. And the kidneys also play a part in the control of BP because of their renin-angiotensin system. So multiple systems work together to control blood pressure by adjusting the amount of bloodflow and the resistance to that blood flow.
4. Identify 7 factors which will increase heart rate.
Fever, high environmental temperatures, exertion, smoking, stress response, pregnancy, pain
5. Trace the path of a RBC through the heart.
Right atrium, through the tricuspid valve, into the right ventricle, through the pulmonary valve, into the lungs for gas exchange, into the left atrium, through the mitral valve, into the left ventricle, through the aortic valve, into systemic circulation.
6. Identify ten risk factors for developing atherosclerosis. Indicate which ones are modifiable and which ones are not. Note that these are the same risk factors for heart disease.
Age- cannot be changed
Gender- cannot be changed
Genetic or familial factors- Cannot be changed
Obesity- Modifiable
Cigarette smoking- Modifiable
Sedentary Lifestyle- Modifiable
