Futuyma, 2009 Douglas Futuyma presents an overview of current thinking on theories of evolution aimed at an undergraduate audience The Evolutionary Biology of Viruses Stephen S. Morse, 1994 **Independent Birth of Organisms** Periannan Senapathy, 1994 **Theories of Evolution** H. James Birx, 1984 *Vertebrate Biology* Donald W. Linzey, 2001 This text offers a balanced approach covering the whole field of vertebrate biology It contains many pedagogical aids for students including boldface key terms throughout and a comprehensive glossary End of chapter pedagogy includes a list of supplemental readings a listing of related Internet sites and chapter review questions It has a well organized comprehensive introduction to classification and nomenclature as well as an extensive illustration programme containing more than 650 photos and diagrams From Darwinian Metaphysics Towards Understanding the Evolution of Evolutionary Mechanisms Momme von Sydow, 2012 Although Charles Darwin predicted that his theory would give zest to metaphysics even he would be astonished at the variety of paths his theory has in fact taken This holds with regard to both gene Darwinism a purified Darwinian approach biologizing the social sciences and process Darwinism found in the disciplines of psychology philosophy of science and economics Although Darwinism is often linked to highly confirmed biological theories some of its interpretations seem to profit from tautological claims as well where scientific reputation cloaks ideological usage This book discusses central tenets of Darwinism historically as well as

systematically for example the history of different Darwinian paradigms the units of selection debate and the philosophical problem of induction as basis of metaphysical Darwinism Crucially the book addresses the Darwinian claim that evolution is governed by an immutable and unrelentingly cruel law of natural selection Paradoxically Darwins theory is a static non evolutionary theory of evolution The current book sketches the historical background and provides suggestions that may help to replace this approach by the idea of an evolution of evolutionary mechanisms see Escher s Drawing Hands on the cover This view even suggests a tendency to overcome the blindness of the knowledge acquisition of primordial Darwinian processes and allows for some freedom from external environments This book first develops a radically Darwinian approach then criticises this approach from within Even Darwinism has a tendency to transcend itself Although the book addresses several empirical issues it does not challenge particular findings Instead it builds on many insights of Darwinism and provides a proposal for interpreting known empirical evidence in a different light It should help pave the way for further developing an understanding of nature that transcends Darwinian metaphysics Publisher s description
